

### REVOLUTIONARY HYGIENE SOLUTIONS

At Smarti/Falcon, we consider safety and hygiene to be of utmost importance and design our products to enhance and support a healthy and safe restroom environment.

In fact our waterfree urinals have been found to minimize by 5 times the bacteria found in urinal bowls as compared to traditional flushing urinals. This may seem counterintuitive, as water and washing is so often associated with cleanliness; but just as humans need water to survive so do bacteria.

By eliminating water from our urinals we create an environment that minimizes bacterial growth.

### MEETING HOSPITAL GRADE STANDARDS

Hygiene is important in all restrooms, but particularly so in Hospital environments. The allowance for the use of Nonwater Urinals was adopted into the 2016 California Plumbing Code as approved by California Building Standards Commission (CBSC) on January 19 and 20, 2016.

#### OSHPD, 412.1.1. Nonwater Urinals.

Nonwater urinals shall have a barrier liquid sealant to maintain a trap seal. Nonwater urinals shall permit the uninhibited flow of waste through the urinal to the sanitary drainage system. Nonwater urinals shall be cleaned and maintained in accordance with the manufacturer's instructions after installation. Where nonwater urinals are installed, not less than one water supplied fixture rated at not less than 1 water supply fixture unit (WSFU) shall be installed upstream on the same drain line to facilitate drain line flow and rinsing. Where nonwater urinals are installed they shall have a water distribution line rough-in to the urinal location to allow for the installation of an approved backflow prevention device in the event of a retrofit.
